EMINENCE AI ACADEMY

AI Career Launch

Start from zero, build real AI applications, and finish with a capstone project you built yourself.

FEE	DURATION	SESSIONS	DELIVERY
₹35,000	1.5 months	32	Classroom & online

EVERY JOB POSTING WANTS EXPERIENCE YOU HAVE NOT BEEN ALLOWED TO GET

You finished a degree that covered theory and are applying for roles that ask for tools you have never opened. The gap is not intelligence and it is not effort — it is that nobody gave you a problem big enough to be worth putting on a CV. This program gives you one, and six weeks of supervision while you solve it.

WHAT YOU WILL BE ABLE TO DO

- Ship a working web application and explain every layer of it
- Read, fix and debug the code an AI assistant writes for you
- Clone a project from GitHub and get it running on your own machine
- Take a raw dataset and turn it into an analysis somebody can act on
- Build an application on top of an LLM API, and an agent that does a job
- Walk into an interview with deployed projects you can defend line by line

IS THIS THE RIGHT PROGRAM FOR YOU?

It is, if…

- You are in your final year, or finished in the last couple of years
- You have little or no coding experience and are willing to start at the beginning
- You can commit to five sessions a week, Monday to Friday, for six weeks
- You want a project you can defend, not a certificate you can file

It is not, if…

- You already write production code — Applied Generative AI is the better fit
- You want a guaranteed job. We do not offer placement services and we will not pretend otherwise
- You can only study at weekends — this batch runs on weekdays

CURRICULUM — 30 EVENINGS AND 2 SATURDAY LABS

01	Build and ship your first AI-made website in week one — nothing to install
02	Coding with AI — Claude Code, Cursor and the vibe-coding workflow, plus GitHub and the terminal
03	How the software you build actually works — frontend, backend, APIs, databases and logins, and why sites need HTTPS, rate limits and access rules
04	Reading and fixing what the AI writes — enough code to stay in control of it
05	Working with data using AI — messy spreadsheets to answers you can defend
06	Judging what AI gives you — spotting a wrong number, a weak claim or a confident mistake
07	What people mean by machine learning — the words you need when an interviewer asks
08	How AI models actually work, where they fail, and what RAG means
09	Build your own AI application on a model API
10	Build AI agents — visually with n8n, then a voice agent that answers a real call
11	Capstone, portfolio and interviews — your GitHub, your CV, and how to talk about what you built

This is the module outline, not a session-by-session syllabus. Order, depth and the specific tools used are adapted to each batch and to the trainer leading it.

SCHEDULE AND FEE

Monday to Friday, five sessions a week

Two full-day Saturday labs, ending in a Demo Day — in the Himayat Nagar classroom for the Hyderabad batch, on Google Meet for the online batch. Included in the 32 sessions, not additional to them.

No prior coding experience required.

₹35,000 in total — the same fee for the Hyderabad classroom batch and the live online batch. They run as separate batches with the same curriculum, the same number of sessions and the same trainer time.
